Google Developer Groups

Community Kit

These guidelines includes a library of messages, graphics and templates to use when promoting your Google Developer Group.

02. Typography

Our Type

Google Sans

Is the main typeface. Use a combination of bold and regular for titles or large sentences, so that the design is not too heavy.

For paragraphs with smaller type point, use the Regular variable.

Normal Aa

Bold Aa

Our Type

Google Sans Mono

Is the secondary typeface and its function is to bring variety and the perception of "code-style writing" to the piece.

It is used for short lines, talent names or additional data in small scale use.

Normal Aa

Bold Aa

03. Color

Color Swatches RGB

We started from the core color and went towards more pastel colors, without losing the brightness and saturation.

OFF White
#f0f0f0

Black 02
#1e1e1e

04. Logos

The new Google Developer Groups logo is an opportunity for community groups to have a stronger visible affiliation with Google.

Use the logo in these formats.

While the **horizontal logo is preferred**, the stacked logo can be used as an alternative when space is a limiting factor.
